Country highlights 2013
Source: IMF; SNL Metals & Mining; GFMS, Thomson Reuters; UNDP; World Bank

Total gold output 228.9 tonnes
Total gold sales (% GDP) 0.1%
Total gold sales $10,386m
Total gold sales (% national exports) 0.7%

97% of total procurement expenditure is spent on in-country suppliers

Total gold sales
$7,919m

Total gold output
168.9 tonnes

Total expenditure
$7,497m

Number of employees and contractors
16,474

Mining and fish habitat co-exist in Alaska

Kinross’ Fort Knox Mine is located on Fish Creek, northeast of Fairbanks in one of the largest gold producing areas in Alaska. As a result of mining activities since the Fairbanks Gold Rush of the early 1900s, water quality and fish habitats were seriously undermined by excessive sediment concentrations, uncontrolled run-off and erosion. Fish populations, including those of the Arctic grayling and the burbot, were decimated.

The development of Fort Knox created opportunities to fix the damage and revitalise the stream’s fisheries, restoring a habitat where native fish populations could thrive. By 2013, Alaska’s Department of Fish and Game monitoring showed the grayling population had grown to more than six times the original target, the burbot is self-sustaining and the habitat is supporting a variety of birds and wildlife. The fact that such success has been achieved in an area immediately downstream of the mine’s tailings storage facility is indicative of the high level of environmental protection that is central to ongoing operations at Fort Knox.
