Report of Sir Isaac Newton, Master of the Royal Mint, to the Lords Commissioners of His Majesty's Treasury, on the price and relationship of gold to silver and the consequences for the coinage of the kingdom. Newton prepared the report in response to the Treasury's request for an account of the large amounts of gold coming in to the Mint and the flight of silver to India. In his report, Newton devalued the guinea, coined in standard gold at 916 parts out of 1000 fine, to £1.1s.6d. This was equivalent to a price of £3.17s.10½d. per standard ounce of gold and £4.4s.11½d. per ounce of fine gold. Except for the period of the Napoleonic wars when cash payment in gold was suspended, this price persisted until the early 20th century.
not here consider them. By the Edict of 1709 a new Pistole was coyned for four new Lewises & is of equal allay & the Fifteenth part of the weight thereof except the Errors of their Mints. And by the same Edict fine Gold is valued at Fifteen times its weight of fine Silver. And at this rate a Guinea is worth 20s.8½d. I consider not here the Confusion made in the Monies in France by frequent Edicts to send them to the Mint and give the King a Tax out of them. I consider only the value of Gold and Silver in proportion to one another.

The Ducats of Holland & Hungary & the Empire were lately current in Holland among the common people in their Marketts and ordinary affairs at five Guilders in specie & five Stivers, and commonly changed for so much. Silver Monies in three Guilder pieces & Guilder pieces, as Guineas are with us for 21s.6d. sterling. At which rate a Guinea is worth 20s.7½d.

According to the rates of Gold to Silver in Italy, Germany, Poland, Denmark & Sweden, a Guinea is worth about 20s. & 7d., 6d., 5d., or 4d. For the proportion varies a little within the sever[a]l Governments in those Countries. In Sweden Gold is lowest in proportion to Silver, & this hath made that Kingdom which formerly was content with Copper Money, abound of late with Silver sent thither (I suspect) for Naval stores.

In the end of King William’s reign and the first year of the late Queen, when Forreign Coyns abounded in England, I caused a great many of them to be assayed in the Mint & found by the assays that fine Gold was to fine Silver in Spain, Portugal, France, Holland, Italy, Germany & and the Northern Kingdoms in the proportions above mentioned, Errors of the Mints excepted.

In China and Japan one pound weight of fine Gold is worth but Nine or ten pounds weight of fine Silver; & in East India it may be worth Twelve. And this low price of Gold in proportion to Silver, it carries away Silver from all Europe.

So then by the Course of Trade & Exchange between nation & nation in all Europe, fine Gold is to fine Silver as 14 4/5 or 15 to one; and a Guinea at the same rate is worth between 20s.5d. & 20s.8½d. except in extraordinary cases, as when a Plate fleet is just arrived in Spain, or ships are lading here for the East Indies, which cases I don not here consider. And it appears by experience as well as by reason that Silver flows from those places where its value is lowest in proportion to Gold, as from Spain to all Europe & from all Europe to the East Indies, China & Japan; & that Gold is most plentiful in those places in which its value is highest in proportion to silver, as in Spain and England.

It is the demand for Exportation which hath raised the price of Exportable Silver about 2d. or 3d. in the ounce above that of Silver in Coyn, & hath thereby created a Temptation to export or melt down the Silver Coyn rather than give 2d. or 3d. more for Forreign Silver. And the demand for exportation arises from the high price of Silver in other places then in England in proportion to Gold, that is, from the higher price of Gold in England then in other places in proportion to Silver; & therefore may be diminished by lowering the value of Gold in proportion to Silver. If Gold in England or Silver in East India could be brought down so low as to bear the same proportion to one another in both places, there would be here no greater demand for Silver then for Gold to be exported to India: And if Gold were lowered, only so as to have the same proportion to the Silver Money in England that it hath to Silver in the rest of Europe, there would be no temptation to export Silver rather than Gold to any other part of Europe. And to compass this last there seems nothing more requisite then to take of about 10d. or 12d. from the Guinea, so that Gold may bear the same propor[cion] to the Silver Money in England which it ought to do by the Course of
Trade & Exchange in Europe. But if only 6d. were taken off at present, what further effects would shew hereafter better then can appear at present, what further reduction would be most convenient for the publick.

In the last year of King William, the Dollars of Scotland worth about 4s.6½d. were put away in the North of England for 5s. & at this price began to flow in upon us. I gave notice thereof to the Lords Comm[issione]rs of the Treasu[ry], & they ordered the Collectors to forbear taking them & thereby put a stop to the mischief.

At the same time the Lewidors of France which were worth but Seventeen Shillings and three ffarthings apiece passed in England at 17s.6d. I gave notice thereof to the Lords Comm[issione]rs of the Treasu[ry], & his late Ma[jes]ty put out a proclamation that they should go but at 17s. & thereupon they came to the Mint & 1,400,000l. were coyned out of them. And if the advantage of 5¼d. in a Lewidor sufficed at that time to bring into England so great a quantity of French Money, and the advantage of three farthings in a Lewisodor to bring to the Mint: the advantage of 9½d. in a Guinea or above may have been sufficient to bring in the great quantity of Gold which hath been coined in these last Fifteen years without any Forreign Silver.

Some years ago the Portugal Moeders were received in the West of England at 28s. apiece. Upon notice from the mint that they were worth only about 27s.7d. the Lords Commissioners of the Treasury ordered their Receivers of Taxes to take them at no more then 27s.6d. Afterwards many Gentlemen in the West sent up to the Treasury a Peticion that the receivers might take with them again at 28s. & promised to get returns for this Money at that rate, alledging that when they went at 28s. their Country was full of Gold which they wanted very much. But the Commissioners of the Treasury considering that at 28s. the Nation would loose 5d. apiece, rejected the Peticion. And if an advantage to the Merchant of 5d. in 28s. did pour that money in upon us: much more hath an advantage to the Merchant of 9½d. in a Guinea or above, been able to do it still, till the cause be removed.

If things be lat alone till Silver Money be a little scarcer, the Gold will fall of itself, for people are already backward to give Silver for Gold, and will in a little time refuse to make payments in Silver without a premium as they do in Spain, & this premium will be an abatement in the value of the Gold. And so the Question is, Whether Gold shall be lowered by the Government or let alone till it falls of itself by the want of Silver Money.

It may be said that there are great quantitys of Silver in Plate, and if the plate were coyned there would be no want of Silver Money. But I recon that Silver is safer from exportacion in the form of Plate then in the form of Money, because of the greater value of the Silver and fashion together. And therefore I am not for coyning the Plate till the Temptation to export the Silver Money (which is a profit of 2d. or 3d. an ounce) be diminished. For as often as men are necessitated to send away Money for answering Debts abroad, there will be a Temptacion to send away Silver rather than Gold, because of the profit, which is almost 4 per cent. And for the same reason Forreigners will chuse to send hither their Gold rather then their Silver.
